

# VIRTUAL REALITY

## in **YOUR** classroom

Through the **Associate Schools program**, we are getting ready to make Project Days and Weeks even more exciting by bringing Virtual Reality into your classroom thanks to our International House friends in Barcelona, Bucharest, Sofia and Split.

### **We are on a mission to innovate in education**

Virtual Reality has become one of the most innovative teaching tools in many educational sectors. Through this project, an innovative platform is being developed for carrying out collaborative group language exercises in the classroom. These will provide an opportunity for students to practise the target language in a fully immersive way, using the well-established methodology of 'Total Physical Response' in a format that has not been used in language learning before.

### **Student Benefits**

These tools will enhance the effectiveness of language learning by boosting the motivation of students, increasing communicative competencies, improving

student focus on details and enhancing their cognitive skills.

### **Communication**

VR naturally compels the students to use language without being cued by the teacher.

### **Retention**

The immersive audio-visual experience of VR stimulates greater retention of information.

### **Engagement**

Capitalising on innovation allows us to capture our students' interest and imagination.

**For more information on the Associate Schools program and Project Days and Weeks, please contact us.**

Virtual Reality 4 Language Learners is a project funded under the Erasmus+ Program (2019-1-HR01-KA204-060781).
